

SASE Solutions Deliver Improved Performance for Network and Security Platforms

Business operations are fundamentally changing as a result of the pandemic. The combination of cloud adoption and mobile-reliant business communication is causing organizations to search for a new architecture that can manage new traffic patterns that bypass traditional datacenter perimeters. This new architecture that is capable of securing multiple enterprise perimeters is secure access service edge (SASE).

Remote workers constitute **58% of the U.S. workforce** in 2022 and **41% are fully remote.**¹

70% of businesses have a digital transformation strategy or are working on one.²

94% of enterprises use the cloud, and **69% utilize a hybrid cloud solution.**³

What Is SASE and How Does It Work?

SASE technologies converge the functions of network and security solutions into a unified, global cloud service. SASE is marked by four main attributes:

Identity Driven

Reduces operational overhead by letting organizations develop one set of network and security policies for users regardless of device or location.

Cloud Native

Leverages key cloud capabilities including elasticity, adaptability, self-healing, and self-maintenance to uniformly deliver security and networking capabilities across the enterprise.

Supports All Edges

Creates one secure network for all company entities including data centers, branch offices, cloud resources, and mobile users.

Globally Distributed

Connects to the nearest PoP to secure and optimize all traffic to ensure that full networking and security are available everywhere and deliver the best experience to all edges.

Many businesses think these new perimeters are separated by gaps that force the deployment of network and security solutions for branches, users, and clouds. This piecemeal approach causes headaches with unnecessary complexity, inferior service, and vulnerable security.

A true SASE platform built on a cloud-first architecture has full visibility and control of all traffic, which eliminates the gaps and blind spots. This setup comprises the ideal platform that optimally connects and secures the modern enterprise.

Leverage CommQuotes for Best-Fit SASE Solutions at the Lowest Possible Price

Partner with us for access to key industry contacts and our time-tested relationships. We'll help you determine if SASE is the right fit for your business and get the solutions you need to thrive in the modern digital age. If you've got a workforce chock-full of remote and hybrid workers that demand best-in-class remote access, network security, and mobility solutions, we're your trusted advisor for finding the SASE solution that meets your unique needs – at better-than-direct pricing. **Contact CommQuotes today.**
